Trieste, Italy

Line 1: Semi-discrete Optimal Transport

Optimal transport map definition:

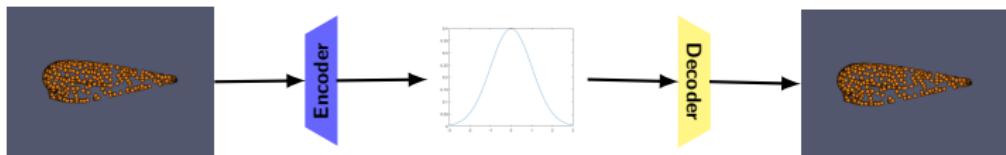

$$\inf \left\{ \int_X c(x, T(x)) d\mu(x) \mid T_*(\mu) = \nu \right\}$$

- Regularity constraints
- Application to design optimization

Line 2: Generative models

Generative models for shape optimization of complex geometries with a large number of parameters.

- Variational autoencoders:

- Generative adversarial networks:
